# INTRODUCTION:

The New Economy is a project that aims to establish an entire ecosystem based on shared resources, starting with food. It brings together like-minded individuals, farmers, and business owners with a new model that is...

## Built For The People!

The foundations of a New Model for A New Economy are grounded in the understanding that certain foundational elements are essential for an economy to succeed. These elements include food production, farmers, trades, healthcare, and businesses.

In this new economic model, these sectors play a crucial role in creating a sustainable and thriving ecosystem.

With a resilient foundation built upon the collaboration and contribution of farmers and essential services. The New Economy paves the way for an economy that flourishes through collective efforts.

To have a successful, sustainable new economy and a thriving ecosystem, it's essential to have a trusted currency to transact with, a currency that has been built with the same vision of The New Economy and that is to see humanity rising globally.

The New Economy Project has partnered with The New Economy Coin also known as TNE, an Independent Digital Currency.

The New Economy and TNE's intention is to create a naturally expanding ecosystem transacting with a trusted, independent currency that is for the people...an economy that allows us all to have significantly more freedom.

## THE NEW MODEL - (ADDING INNOVATION & ASSURANCE)

### There are 6 Critical Pieces To The New Model...

1. **Help Farmers** Quickly Save Money...
2. Farmers Make **Food Available** For TNE.
3. Having Food Available - Offers TNE **Spending Assurance**.
4. Spending Assurance Motivates - Critical **Service Providers** - To Participate.
5. With Critical Services Available - **More Businesses** - Are Drawn To Participate.
6. **The Domino Effect** Can Now Take Over.

**The stronger the foundation, the stronger and faster the domino effect, thus making farmers critically important.**

The foundation of this New Economy is centred around food, recognising its universal importance. By making food available for 100% TNE, a solid basis is established for building an expanding and giving economy.

The New Economy aims to support farmers in reducing their costs by providing them with access to resources such as used vegetable oil for converting into biodiesel, timber, trades, and labour.

These resources help farmers minimise their cash expenses, enabling them to make more food available for The New Economy, which can be purchased with The New Economy Digital Currency.

**To address the cash considerations that farmers face when making food available for TNE, cost savings become a vital component. By assisting farmers in reducing their everyday cash expenses, they gain a greater capacity to contribute to The New Economy.**

This support for farmers creates a powerful domino effect. Once food is available from farmers for 100% TNE, other essential businesses such as trades, healthcare, and professional services can also benefit from immediate cash savings.

With something as essential as food now available for TNE - this then means that other key services, such as **trades, health care practitioners and professional services** can now receive TNE for their essential services and can use the TNE they receive to buy food.

This represents assurance and flow of the new currency for them within the new economy.

As these additional services are made available, the appeal to others to participate increases and, a domino effect of an increasing number of products and services can now be made available and accessed for TNE.

This, in turn, allows them to make more products and services available for TNE, expanding the offerings within The New Economy Community. By establishing a strong foundation that begins with farmers and essential services.

**The New Economy is successfully building an economy that thrives on collaboration and contribution. The progress made so far has been highly encouraging and continues to generate excitement.**

## THE NEW ECONOMY:

### AN INDEPENDENT DIGITAL CURRENCY

Central to this new economy is The New Economy Coin (TNE), an independent digital currency with distinctive features.

It is crucial to understand that TNE differs from traditional cryptocurrencies as it operates on its own blockchain and aligns with different objectives.

TNE reintroduces the power of compounding to empower individuals, offering the potential to foster freedom, abundance, and the capacity to give.

Notably, TNE is not issued or affiliated with any banking institution, ensuring its autonomy and integrity within the economic ecosystem.

### THE PURE INTENTION OF THE TNE COIN

The New Economy Coin intends to provide a trusted digital currency and a naturally expanding economy that offers greater freedoms to its users.

TNE is designed to be independent, secure, and trusted and is aiming to dissolve volatility.

# WHY BLOCKCHAIN TECHNOLOGY?

## (POWER TO THE PEOPLE)

The New Economy Coin sees blockchain technology as an independent platform with a pure potential. Not to be used just for Crypto - but to be used for something quite different from traditional crypto and that is...

**An Independent Digital Currency** - used for the exchange of goods and services - whilst at the same time actually adding unique benefits to those that use the currency.

It's seen as an innovative use of blockchain technology.

The TNE Coin utilises blockchain technology to facilitate secure and direct transactions without the need for intermediaries like banks. By using TNE, individuals and businesses can transact with each other worldwide, quickly and securely.

TNE stands out from traditional cryptocurrencies by having its own independent blockchain, ensuring low-cost transactions, high transaction speeds and the ability to offer additional benefits not seen in traditional crypto.

## HOW AND WHY IS TNE SO DIFFERENT FROM TRADITIONAL CRYPTO?

TNE operates on its own independent blockchain, unlike many cryptocurrencies that rent out their blockchain, resulting in slower transaction speeds, higher costs and limited features.

It's a **native coin**, which means it has its own set of rules and smart contracts embedded within the coin itself.

These rules add benefits and in the case of TNE - these benefits are designed to be giving and empowering to the people.

TNE is anchored to the last highest price of gold on the exchange, aiming to reduce volatility and establish itself as a more reliable currency for everyday transactions.

## CONSENSUS - (THE POWER OF THE PEOPLE)

TNE attempts to derive its value from consensus, similar to how the value of fiat currencies is based on the agreement of their worth. Business owners who accept TNE as a form of payment contribute to the consensus of its value, helping to strengthen its position as a trusted digital currency.

## COMPOUNDING - (THE 8TH WONDER OF THE WORLD)

TNE offers a unique feature called compounding rewards, which incentivises TNE wallet holders to participate in the network. Wallet holders receive compounding rewards at a rate of 16% per annum, directly into their TNE wallet, enabling the expansion of personal capacity for generosity.

**Einstein has referred to compounding as the 8th wonder of the world.**

## CREDIBILITY: AUDIT, SUCCESSION & GOVERNANCE:

TNE has undergone a full third-party blockchain audit to verify the integrity and credibility of its independent blockchain. This includes validating the security of the blockchain plus verification of the speed and number of transactions per second.

The currency's succession and governance strategy has been developed with top experts to ensure proper management.

## INDEPENDENT EXCHANGE & ECOSYSTEM:

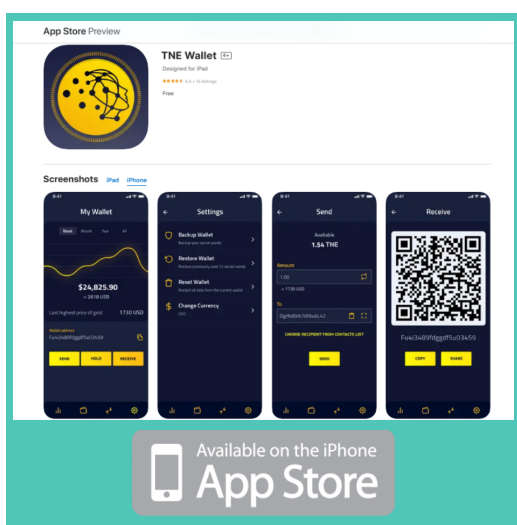

TNE is building its own exchange to provide a reliable and secure platform for trading the digital currency. This independent exchange aims to eliminate the uncertainties commonly associated with traditional cryptocurrency exchanges, aligning with the pure intention of serving the people.

## SIMPLE-TO-USE WALLET:

A digital currency wallet works very similar to an online bank account.

The TNE wallet is readily available to download from **Google Play** and the **App Store**. Users can easily download the wallet onto their phones, and the setup process is quick and simple. The TNE wallet provides users with complete ownership and control over their funds.

Due to the nature of blockchain technology, The New Economy Coin does not have access to users wallets and cannot recover the contents stored within them.

To secure the wallet, users are provided a unique SEED PHRASE - 12 completely random words. This adds an extra layer of protection to the wallet and ensures that only the user has access.

The TNE wallet is designed to be user-friendly and intuitive, with simple tutorials available on The New Economy Coin website for additional guidance if needed.

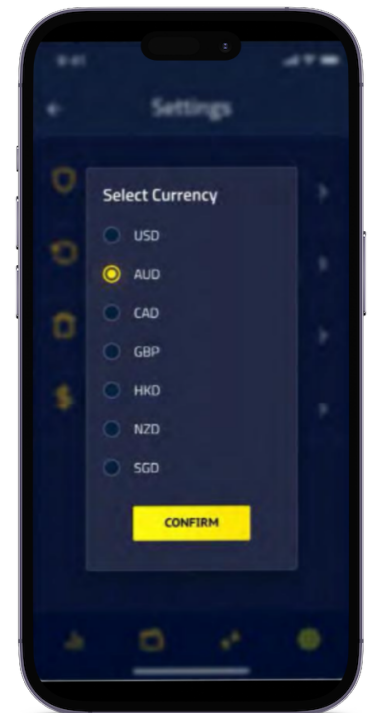

## HERE ARE SOME OF THE NOTABLE FEATURES OFFERED BY THE TNE WALLET

- **Multiple Accounts:** Users have the option to create multiple accounts, allowing them to separate their savings from their spendings or differentiate personal funds from business funds.
- **Free Transactions:** Users enjoy up to 25 free transactions per day, with impressive speeds of up to 1900 transactions per second.
- **Transaction History Report:** Users can access a transaction history report that helps them keep track of their sent and received transactions, as well as the compounding rewards earned.
- As demonstrated, the TNE wallet offers an extensive, well-thought-out list of features, providing users with a seamless and secure digital currency management experience.

### Currency Converter:

Users can quickly convert their chosen currency to TNE, streamlining the shopping experience.

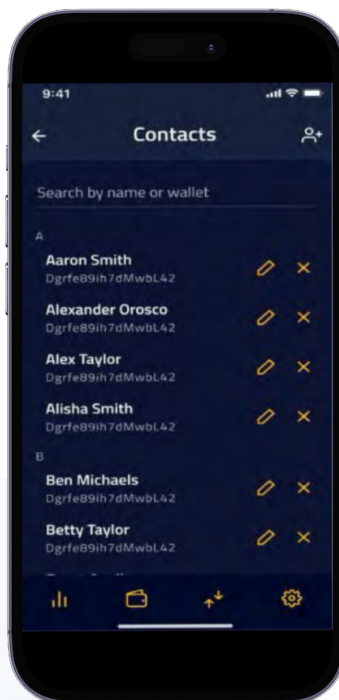

### Preferred Currency Setting:

Users can select their preferred currency setting, making it easier for them to manage their funds and conduct transactions.

### Address Book:

The wallet includes an address book feature that enables users to store frequently used contacts, making transactions more convenient.

## HOW HAVE THINGS BEEN PROGRESSING?

The achievement of building an entire community that utilises and transacts with TNE as a currency is substantial.

The Directory of businesses accepting TNE as payment is growing, providing participants with access to an increasing number of ways to use and spend their TNE. As the Directory expands, so does the spending capacity of individuals within the ecosystem.

Numerous examples highlight the progress made so far, including people paying rent to landlords, adopting TNE as part of their income, repurposing thousands of litres of used vegetable oil for biodiesel, and significant purchases made using TNE for cattle, sheep, solar panels, and building supplies.

All of this would not be possible without the willingness of individuals, like yourself, to participate and contribute in exchange for 100% TNE as a form of payment.

## IN CONCLUSION:

### THE NEW ECONOMY OFFERS VARIOUS WAYS TO PARTICIPATE...

- **Purchase:** You can take advantage of early buyer pricing and purchase TNE digital currency using cash or your superannuation.
- **Accept:** Accepting TNE as a payment method in your business can create an additional source of income.
- **Assets:** Sell assets such as vehicles, equipment, land or property in exchange for TNE.
- **Time:** If you have the time and willingness, you can contribute to the expansion of The New Economy. Opportunities may include helping farmers, picking up used vegetable oil, or assisting in packing food boxes for community distribution.
- **Refer:** By referring other like-minded individuals, businesses, or networks to buy TNE digital currency, accept TNE as payment in their business, or commit their time, you can help expand the project. Generous rewards await those who actively participate in the referral program.

In just a few **simple steps** you can gain a full understanding of The New Economy and then choose the options that best fit your circumstances.
